

Deployment Tutorial

Requirement 3 — Build a Tutorial to Recreate Requirement 2 in Under 15 Minutes

Deploying “Dog Slideshow” React App with CI/CD + Custom Domain

Overview

This guide explains how to:

- Build and deploy your Dog Slideshow React application
- Use Azure Static Web Apps for hosting
- Configure GitHub Actions for CI/CD
- Connect a custom domain purchased from GoDaddy

This tutorial is specifically adapted to your GitHub repository.

Prerequisites

Make sure you have:

Requirement	Details
Node.js	Version 18 or higher
Git	Installed locally
GitHub Account	Required for CI/CD
Azure Subscription	Azure for Students (free credits) works

Custom Domain

Purchased via GoDaddy

Step 1 — Clone The Repository

project repository: <https://github.com/renuyama/dog-slideshow>

Clone it locally:

```
git clone https://github.com/renuyama/dog-slideshow
```

```
cd dog-slideshow
```

```
npm install
```

```
npm start
```

Your local development server should now run the Dog Slideshow app.

Step 2 — Build Your React Project

Once your app is running successfully, generate the production build:

```
npm run build
```

This creates a `build/` directory, which Azure will deploy.

Step 3 — Deploy Using Azure Static Web Apps

1. Go to:
<https://portal.azure.com>
2. Click:
Create a resource → Static Web App

3. Fill in the required fields:

Field	Value
App Name	dog-slideshow
Region	<i>Global</i>
Deployment Source	GitHub

4. Authorize Azure to access your GitHub account.

5. Select repository details:

Setting	Value
Repository	renuyama/dog-slideshow
Branch	main
Build Preset	React
App Location	/
Output Location	build

6. Click **Create**.

Azure will automatically generate a **GitHub Actions CI/CD pipeline** inside your repository.

Step 4 — Verify the Deployment

Within 2–4 minutes:

- GitHub Actions will complete the workflow
- Azure will deploy your app

You will receive a temporary URL like:

`https://<random-name>.azurestaticapps.net`

Every time you push changes to GitHub → Azure redeploys the latest version automatically.
